<b>1 Repairing a Boundary Mesh</b>	<b>1-1</b>
Introduction . . . . .	1-1
Prerequisites . . . . .	1-1
Preparation . . . . .	1-2
Step 1: Reading and Displaying the Boundary Mesh . . . . .	1-3
Step 2: Check for Free and Unused Nodes . . . . .	1-5
Step 3: Repair the Boundary Mesh . . . . .	1-6
Step 4: Use the Rezoning Feature . . . . .	1-9
Step 5: Improve the Boundary Mesh . . . . .	1-11
Step 6: Check the Skewness Distribution of the Boundary Mesh . . . . .	1-12
Step 7: Repairing the Boundary Mesh Further . . . . .	1-13
Step 8: Generate a Multiple Region Volume Mesh . . . . .	1-24
Step 9: Check the Volume Mesh . . . . .	1-25
Step 10: Check and Save the Volume Mesh . . . . .	1-26
Summary . . . . .	1-27
<b>2 Tetrahedral Mesh Generation</b>	<b>2-1</b>
Introduction . . . . .	2-1
Prerequisites . . . . .	2-1
Preparation . . . . .	2-1
Step 1: Read and Display the Boundary Mesh . . . . .	2-2
Step 2: Generate the Mesh using the Skewness-Based Refinement Method	2-5
Step 3: Generate the Mesh using the Skewness-Based Refinement Method and a Size Function . . . . .	2-10

Step 4: Generate the Mesh using the Advancing Front Refinement Method and a Size Function . . . . .	2-12
Step 5: Examine the Effect of the Maximum Cell Volume . . . . .	2-15
Step 6: Examine the Effect of the Growth Factor . . . . .	2-16
Step 7: Generate a Local Refinement in the Wake of the Car . . . . .	2-18
Step 8: Check and Save the Volume Mesh . . . . .	2-22
Summary . . . . .	2-22
 <b>3 Zonal Hybrid Mesh Generation</b> <span style="float: right;">3-1</span>	
Introduction . . . . .	3-1
Prerequisites . . . . .	3-1
Preparation . . . . .	3-2
Step 1: Read and Display the Mesh . . . . .	3-3
Step 2: Merge the Free Nodes on the Tri/Quad Border . . . . .	3-6
Step 3: Check the Skewness Distribution of the Boundary Mesh . . . . .	3-7
Step 4: Generate the Tetrahedral Mesh Using Pyramids to Transition Between the Hexahedral and Tetrahedral Mesh . . . . .	3-8
Step 5: Extend the Mesh Using Prisms . . . . .	3-14
Step 6: Check and Save the Volume Mesh . . . . .	3-20
Step 7: Generate the Tetrahedral Mesh Using a Non-Conformal Transition Between the Hexahedral and Tetrahedral Mesh . . . . .	3-23
Summary . . . . .	3-27
 <b>4 Viscous Hybrid Mesh Generation</b> <span style="float: right;">4-1</span>	
Introduction . . . . .	4-1
Prerequisites . . . . .	4-1
Preparation . . . . .	4-2
Step 1: Read and Display the Boundary Mesh . . . . .	4-3
Step 2: Check for Free and Unused Nodes . . . . .	4-5
Step 3: Check the Quality of the Surface Mesh . . . . .	4-6

---

Step 4: Set Parameters for Prism Layer Shrinkage and Manual Tetrahedral Meshing . . . . .	4-7
Step 5: Set Parameters for Ignoring Prism Layers and Automatic Meshing . . . . .	4-19
Summary . . . . .	4-24
<b>5 Hexcore Mesh Generation</b>	<b>5-1</b>
Introduction . . . . .	5-1
Prerequisites . . . . .	5-1
Preparation . . . . .	5-2
Step 1: Read and Display the Mesh . . . . .	5-3
Step 2: Check and Improve the Skewness of the Surface Mesh . . . . .	5-5
Step 3: Repair the Boundary Mesh . . . . .	5-6
Step 4: Generate the Tetrahedral Mesh . . . . .	5-8
Step 5: Generate the Hexcore Mesh . . . . .	5-11
Step 6: Examine the Effect of the Buffer Layers on the Hexcore Mesh . . . . .	5-13
Step 7: Automatically Generate the Hexcore Mesh with Prism Layers and a Local Refinement Region . . . . .	5-16
Summary . . . . .	5-22
<b>6 Generating the Hexcore Mesh Upto Domain Boundaries</b>	<b>6-1</b>
Introduction . . . . .	6-1
Prerequisites . . . . .	6-1
Preparation . . . . .	6-1
Step 1: Read and Display the Boundary Mesh . . . . .	6-2
Step 2: Delete the Outer Box Boundaries . . . . .	6-4
Step 3: Set the Hexcore Meshing Parameters . . . . .	6-5
Step 4: Automatically Generate the Hexcore Mesh Upto the Boundaries with Prism Layers . . . . .	6-7
Summary . . . . .	6-15

<b>7 Using the Boundary Wrapper</b>	<b>7-1</b>
Introduction . . . . .	7-1
Prerequisites . . . . .	7-1
Preparation . . . . .	7-2
Step 1: Read and Display the Mesh . . . . .	7-3
Step 2: Perform Pre-Wrapping Operations to Close Holes in the Geometry	7-4
Step 3: Initialize the Surface Wrapper . . . . .	7-12
Step 4: Check the Region to be Wrapped . . . . .	7-13
Step 5: Refine the Main Region . . . . .	7-18
Step 6: Close Small Holes Automatically . . . . .	7-19
Step 7: Wrap the Main Region . . . . .	7-23
Step 8: Capture Features . . . . .	7-24
Step 9: Post Wrapping Operations . . . . .	7-28
Step 11: Create the Tunnel . . . . .	7-38
Step 12: Generate the Volume Mesh . . . . .	7-39
Step 13: Improve the Volume Mesh . . . . .	7-41
Step 14: Separate the Tunnel Inlet and Outlet . . . . .	7-42
Summary . . . . .	7-43
<b>8 Cavity Remeshing</b>	<b>8-1</b>
Introduction . . . . .	8-1
Prerequisites . . . . .	8-1
Preparation . . . . .	8-1
Case A. For a Tetrahedral Mesh . . . . .	8-2
Case B. For a Hybrid Mesh (Tetrahedra and Prisms) Having a Single Fluid Zone . . . . .	8-11
Case C. For a Hybrid Mesh (Tetrahedra and Prisms) Having Multiple Fluid Zones . . . . .	8-21
Case D. For a Hexcore Mesh . . . . .	8-24
Summary . . . . .	8-29
